COLLABNEXT

SOVEREIGN • COLLABORATIVE • SECURE

CollabNext: a secure, sovereign, collaborative suite as an alternative to GAFAMs

8 partner publishers

A collaborative platform tailored to your needs

A suite that complies with European security standards

The CollabNext project aims to bring a complete, sovereign and secure collaboration suite to the European market, offering alternatives to American solutions such as Microsoft Office 365. This will include tools like email, instant messaging, calendaring, videoconferencing, office automation, document management, file sharing...

CollabNext is led by a consortium of 8 technology players - including Alinto - and is supported by the French government. It responds to the needs of European companies and administrations for a collaborative digital environment. Find out more about the project with Pascal Baratoux, CISO at Jamespot, one of CollabNext's partners.

An association of 8 players for a competitive European offer

The CollabNext project was launched in 2023 in response to the France 2030 call for projects, a major government investment plan aiming, among other things, at mastering sovereign and secure digital technologies. In line with this objective, CollabNext provides a comprehensive solution for companies seeking reliable, sustainable European alternatives.

Offering everything from collaboration platform to cloud hosting and AI, CollabNext is backed by a **consortium of 8 IT partners**: Jamespot, 3DS OUTSCALE, Alinto, Clever Cloud, Datakeen, Glowbl, Wallix, XWiki. " *The consortium gives us more credibility. We appear to be solid players and this strengthens our legitimacy*", explains Pascal Baratoux.

Within the consortium, Alinto brings its expertise in electronic messaging and email security with its SOGomail and Cleanmail solutions.

The aim is to develop a **complete collaborative office suite as an alternative to the GAFAMs' digital workplaces**, in particular Microsoft's Office 365. CollabNext's advantage lies in its **modularity**, allowing each company to pick and choose the solutions it needs to build a tailor-made suite.

Sovereign, secure... CollabNext's major benefits

CollabNext's first requirement is **the SecNumCloud qualification**. The SecNumCloud standard, issued by the French National Agency for the Security of Information Systems (ANSSI), defines a set of security rules that must be respected. It guarantees a high level of technical, operational and legal requirements. "SecNumCloud promises **respect for privacy and compliance with European standards**. Being SecNumCloud qualified also means responding to the challenges of government agencies and offering them a solution that meets their security expectations", emphasises the CISO.

SecNumCloud qualification guarantees **the sovereignty of the solution**. All data is protected, and cannot be accessed or used

Objectives

- Offer a sovereign collaboration suite as an alternative to the market giants
- Ensure secure, long-term service
- Provide a competitive European digital workplace

About Alinto

Founded in 2000, Alinto is a company specialized in the email industry: SaaS messaging service, antispam, email server, etc. through several products:

- **SOGomail** : An all-in-one solution that combines a secure and collaborative mail server with Alinto's advanced email security technology and integrates a top-notch, responsive, and opensource webmail.
- **Cleanmail** : The best email filtering and AI technology to protect your email communications from all risks and threats.
- **Serenamail** : SMTP gateway with carrier-grade deliverability for your transactional email.

Alinto employs around thirty people and provides a quality service to more than a million users. More than 100 million emails are processed every day thanks to its messaging services.

by agencies or competitors under extraterritorial laws.

Moreover, "by choosing solutions published by European IT players, you get the guarantee of an **accessible contact and a close relationship**: support is **local and responsive**, we're aware of **local needs and challenges**, and we can be much more **flexible** than a contact from a multinational...".

Finally, by deploying a sovereign solution such as CollabNext, you are helping to support employment and growth in IT companies across Europe.

CollabNext's strength also lies in the expertise of each of the project's partners: "We are **software publishers who are specialists in our tools** and who pool their know-how: this guarantees technically precise modules that can be better adapted to your needs" emphasises Pascal Baratoux.

Benefits

- A solution that can be tailored to your needs
- Robust tools from proven, expert publishers
- Cyber protection to the highest standards
